Education

SEPTEMBER 2017 – DECEMBER 2018

Master of Arts in Science, Health and Environmental Reporting / New York University, New York

- **Marlene Sanders Journalism Award:** Recognizes students at the Arthur L. Carter Journalism Institute who display energy, skill and devotion in their work.

SEPTEMBER 2010 – APRIL 2016

Bachelor of Science in Natural Resource Conservation / University of British Columbia, Vancouver

Experience

JANUARY 2019 – PRESENT

Freelance Journalist / Various publications, Canada

- Pitch and write articles for publications, including [The New York Times](#), [Hakai Magazine](#), [Yale Environment 360](#), [Popular Science](#), [Audubon](#) and [Spectrum](#).
- Edit science articles for [Newsela](#), an educational content platform, facilitating reading comprehension for students of differing abilities.
- Copy-edited blog posts, liaised with bloggers to resolve tech issues and created Facebook posts for [Psychology Today](#) on a freelance basis from December 2019 to October 2021.

SEPTEMBER 2018 – DECEMBER 2018

Editorial Intern / Spectrum, New York

- Wrote news stories for [Spectrum](#), a site for autism researchers, working with editors and fact-checkers to provide copy on deadline.
- Pitched story ideas in bi-weekly meetings.
- Assisted with a shoot for a video about [spaces designed for people with autism](#).

MAY 2018 – AUGUST 2018

Research Intern / Ark Media, New York

- Researched story ideas related to the history of genetics for Ark Media's "[The Gene: An Intimate History](#)," a docuseries aired on PBS.
 - Compiled background information on sources and prepared interview questions.
 - Collected archival footage and images.
-

Selected publications

- [Cold Plunges Are Trendy. Can They Really Reduce Anxiety and Depression?](#) Early research suggests this age-old practice might benefit mental health, but more research is needed.
- [Cracking Autism's Sleep Conundrum](#) Sleep problems may contribute to, or derive from, autism traits — or both. After decades of work, researchers are beginning to uncover biological connections between the two conditions, revealing new paths to potential treatments.
- [Surrogacy Across Species](#) Scientists can now borrow the bodies of one fish species to produce another — whether they should, though, is an open question.
